

## step 1: check that your product is registered

Find the NRCS registration number on the product, then check to see if it is on NRCS list of approved disinfectants [here](#)  
It is an advantage if the disinfecting product has the appropriate SABS Mark permit, eg SANS 636, SANS 1853

## step 2: read the label and usage directions

Follow the product's directions. Check 'use sites' and 'surface types' to verify type of application/ where you can use the product. Pay particular attention to dilution instructions. Read the 'precautionary statements.'

## step 3: pre-clean the surface

Using gloves, make sure to wash and rinse the surface as directed with detergent/ soap and water if the directions mention pre-cleaning, or if the surface is visibly dirty.

## step 4: follow the contact time

You can find the contact time in the directions. The surface should remain wet the whole time to ensure the disinfecting product is effective.

## step 5: wear gloves and wash your hands

For disposable gloves, discard them after each cleaning. For reusable gloves, dedicate a pair to disinfecting COVID-19. Wash your hands after removing the gloves.

## step 6: lock it up

Disinfectants are designed and intended to kill/ destroy. Keep lids tightly closed and store as directed, safely out of reach of children and animals.
